SKILLS

Design

End-to-end UX & product design · User-centred design · Interaction design · Information architecture · UX copy · Visual design · Journey mapping

Research

Moderated & unmoderated usability testing (Lyssna) · Interviews · Concept testing · Card sorting · Qualitative synthesis & thematic analysis · Lean / agile research

AI & Tools

Figma · Figma Make · Claude · FigJam · Hotjar · Amplitude · Mixpanel · Segment · Google Analytics

Accessibility

WCAG principles · Inclusive design · Accessible component design · Audits to regulatory & brand standards

EDUCATION

MSc Human-Computer Interaction

First Class with Distinction
Newcastle University, UK · 2023–2024
· NCL+ Award

BTech Computer Science & Engineering

First Class with Distinction
Amrita Vishwa Vidyapeetham, India · 2019–2023

ACHIEVEMENTS

TechNExt AI workshop

Co-planned and presented a session demystifying AI for non-technical stakeholders.

Teens for AI Hackathon (2024)

Design & coding mentor; team finished runners-up.

PROFILE

UX and product designer with a Computer Science background, focused on making complex decisions feel simple and respectful of people's time, attention, and context. Experienced across the full end-to-end design process — from user research and problem framing through to interaction design, prototyping, and user-centred solutions — within in-house, Agile, cross-functional product teams. Comfortable on web and mobile, navigating tight regulatory frameworks while keeping a user-first mindset. Actively uses AI tools, including Claude and Figma Make, in the design and research process.

EXPERIENCE

Product Designer Tedaisy Insurance Group, UK

Dec 2024 – Present

UK pet insurance group (Perfect Pet, Now Pet Insurance), working within FCA Consumer Duty and regulatory requirements.

Web — Quote Flow Redesign

- Led end-to-end UX research and redesign of the insurance quote journey across two brands — the primary conversion surface for both businesses.
- Designed and executed a six-week parallel research plan covering the quote flow and a personalised quote-list page, scoped to FCA Consumer Duty obligations.
- Used moderated usability sessions, interviews, unmoderated tests (Lyssna), and quantitative analysis (Hotjar, Amplitude, Google Analytics) to identify friction and funnel drop-off.
- Translated findings into redesigned flows covering information architecture, question sequencing, UX copy, and interaction design — with accessibility built in.
- Outcome: improved quote completion rate; handover-ready Figma specs delivered to engineering.

Web — Self-Serve Portal: Payment Management

- Researched and designed a new payment management feature letting customers modify payment instructions without contacting support.
- Identified payment queries as a top support contact type through support data, call logs, and stakeholder interviews — framing the business case.
- Designed the end-to-end flow from entry to confirmation, covering edge cases, error messaging, and WCAG-compliant components.
- Outcome: reduced support demand; delivered with full Figma spec and interaction notes.

Design System & AI-Assisted Design

- Developed and maintained a shared design system (tokens and components in Figma) used across both brands — a single source of truth that reduced design drift and rework.
- Built to WCAG standards — colour contrast, interactive states, focus management — with annotations for engineers.
- Used Claude and Figma Make to prototype and stress-test concepts before full Figma builds, and across research planning, synthesis, and reporting — cutting turnaround while preserving rigour.

Mobile — Perfect Pet App (Flutter)

- Designed the Perfect Pet mobile app end-to-end, from early concept to handover-ready Figma specs — a cross-platform app for managing cover, accessing content, and looking after pet health.
- Conducted internal usability testing to validate design hypotheses, iterating on layouts and interactions to improve clarity and user satisfaction.
- Produced UX documentation, wireframes, and interaction flows to align internal developers and external vendors on design intent and consistency through delivery.

Customer Technology Engineer Perro, UK

Dec 2023 – Nov 2024

Dog health and activity app helping owners care for their dogs through digital tools and engagement features.

- Used qualitative research — interviews, focus groups, usability tests — to redesign onboarding and landing screens, identifying comprehension gaps and friction.
- Reduced drop-off and improved early engagement by restructuring information flow, simplifying copy, and improving visual hierarchy.
- Implemented personalised in-app and email experiences via Customer.io, iterating on UX copy, trigger logic, and timing to improve retention and satisfaction.
- Mapped and refined end-to-end user journeys and analysed behavioural data (Segment, Mixpanel) to prioritise the roadmap and validate decisions.

Volunteer UX Designer Reach Volunteering, UK

May 2026 – Present

Charity connecting skilled volunteers with organisations that need their expertise.

- Simplifying mobile flows and improving the experience for both volunteers and charities on the platform.
- Leading discovery research and UX design for a new paid tier — user interviews and concept testing on willingness to pay, perceived value, and feature differentiation.

SELECTED EDUCATION DETAIL

- MSc relevant modules: Interaction Design Methods · Research Methods in HCI · Human–AI Interaction & Futures · Technologies for HCI · Systems and Societies · Sustainable HCI.
- MSc design project — sustainable shopping companion app: research-led design helping consumers understand the human and ecological impact of purchases, full end-to-end UX from research to prototype.
- BTech — rural demographic data app for a GIS study: designed for low literacy and low connectivity; data errors dropped by over 50% after deployment.
